This fragment, which encompasses most of the coding region of the mouse P600 cDNA, was radioactively labelled and hybridised with filter lifts prepd. from a cDNA library made from a clone of an AlO T cell line. One clone, designated PA 10.66, was subcloned into MI3 and sequenced. This sequence encodes human IL-13.

A second clone was also identified (PSEI-NG30bis) which differed only in the identity of codon 41. The corresponding proteins differ in the amino acid at position which is either Asp (in NC30) or Gly (in NC30bis). The cytokine acts on monocytes and B lymphocytes and is useful in treatment of see Q28941-Q28947.

The proteins differ only in the amino acid at position 41 which is either Asp or Gly. The cytokine acts on monocytes and B lymphocytes and is useful in treatment of tumours and some infections and inflammatory conditions.

An approx. 400 bp DNA fragment derived from a Pst/PvuII restriction digest of the mouse P600 cDNA clone was isolated. This fragment, which encompasses most of the coding region of the mouse P600 cDNA, was radioactively labelled and hybridised with filter lifts prepdicom a cDNA library made from a clone of an AlO T cell line. One clone, designated PA 10.66, was subcloned into M13 and sequenced. This sequence encodes human IL-13.
                                                                                                                                                                                                                                                                                                                                                                                     Purified interleukin-13 proteins and antibodies - obtd. using mouse gene encoding related protein P600

They are obtd. by site-directed mutagenesis of natural IL-13 sequences. The muteins antagonist activity of IL-13 or IL-4. They have partial cytokine agonist activity, exhibit less than 80% maximal agonist activity of natural IL-2, and/or antagonize cytokine activity by least about 50% when present at a 100-fold excess. They and other cytokine muteins (see also R92790-22, R92795-802) are useful in the screening of cytokine and cytokine receptor levels, and in the diagnosis or treatment of e.g. inflammation, cancer, and degenerative disorders.

They are obtd. by site-directed mutagenesis of natural P600 sequences. The muteins antagonise the activity of IL-13 or IL-4. They have partial cytokine agonist activity, exhibit less than 80% maximal agonist activity of natural IL-2, and/or antagonize cytokine activity by least about 50% when present at a 100-fold excess. They and other cytokine muteins present at a 100-fold excess. They and other cytokine muteins cytokine and cytokine receptor levels, and in the diagnosis or treatment of e.g. inflammation, cancer, and degenerative disorders.

The present sequence represents the invasin protein SipC. The specification describes a method for the production of recombinant invasin proteins which are superior to presently approved adjuvants due to their low toxicity, their ability to stimulate both peripherals and mucosal immune response, and ease of production. The invasin protein may be used as a vaccine and as an adjuvant for the prevention of diseases such as shigellosis, salmonellosis and diseases caused by enteroinvasive E. coli, and in stimulating the immune system of immuno-compromised individuals. The invasin protein is also useful for intracellular delivery of therapeutic and diagnostic agents, and to stimulate immune response by cells in vitro. The invasin protein an immune response to the antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes targeting ligands which are mutagenized IL13 (interleukin 13) molecules having one or more mutations in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New mutagenized interleukin 13 molecules for delivery of cytotoxins to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      purified recombinant invasin proteins IpaC and SipC useful as an avant and vaccine against shigellosis, salmonellosis and

```
This invention describes a nove isolated polypeptide (i) and its encoding nucleic acid molecule (II) which have immunosuppressive, antiarthritic, antirheumatic, antiproliferative, cytostatic, cardiant, cardiantion or susceptibility to a pathological condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) are also used in diagnoshing a methological condition or susceptibility to a pathological condition. The pathological condition or susceptibility to a pathological condition. The cardiosted of (II) can also be used in alleviating symptoms associated with the disorders and in diagnostic immunosasays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are cardiovascular disorders e.g. cardiac arrest, cerebrovascular arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. The polypeptides can cludy and ocular disorders e.g. corneal infection. The polypeptides can cludy and ocular disorders e.g. corneal infection. The polypeptides can cludy and ocular disorders e.g. corneal infection. The polypeptides can cluso be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sumburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to creperate tissues and in chemotaxis. The polypeptides are used to modulate mammalian metabolism, to change mammal's mentabolism, to change mammal's mentabolism, to change mammal's mentabolism to change mammal's mentabolism, to change members, such as to conditive qualities, as a foreage expandence or decrease storage capabilities, increase or decreases storage capabilities, factorate capabilities, reproductive capabilities ore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

C; Comment: This protein was found in virulent strains but not in avirulent, invasion-neg tion is associated with the invasion of the bacteria into colonic epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT . 6

N.Alternate names: upstream binding factor 1
C.Species: Xenopus laevis (African clawed frog)
C.Species: 18-Feb-1994 #sequence_revision 10-Nov-1995 #text_change 24-Sep-1999
C.Accession: S15667
R.Bachvarov, D.; Moss, T.
Nucleic Acids Res. 19, 2331-2335, 1991
A.Title: The RNA polymerase I transcription factor XUBF contains 5 tandemly repeated A.Reference number: S15667; MUID:91252272
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      4

Genes Dev. 5:1957-1968(1991).

1- FUNCTION: UDF RECCGNIZES THE RIBOSOMAL RNA GENE PROMOTOR AND
ACTIVATES TRANSCRIPTION MEDIATED BY RNA POLYMERASE I THROUGH
COOPERATIVE INTERACTIONS WITH THE SPECIES-SPECIFIC FACTOR SLI.
IT BINDS SPECIFICALLY TO THE UPSTREAM CONTROL ELEMENT.

1- SUBBNIT: XUBF COMSISTS OF 2 POLYMEPTIDES OF 82 AND 85 KDA,
ENCODED BY THE SAME OR CLOSELY RELATED GENES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DNA-binding; Activator; Nuclear protein;

-!- FUNCTION: THIS PROTEIN IS ESSENTIAL TO THE CELL-DIVISION PROCESS.

ITS SEEMS TO ASSEMBLE HATO A DYNAMIC RING ON THE INNER SURFACE OF THE CYTOPLASMIC MEMBRANE AT THE PLACE WHERE DIVISION WILL OCCUR, AND THE FORMATION OF THE RING IS THE SIGNAL FOR SEPTATION TO BEGIN. BINDS TO AND MYDROLYZES GTP (BY SIMILARITY).

-!- SUBUNIT: AGGREGATE TO FORM A RING-LIKE STRUCTURE (BY SIMILARITY).

"The RNA polymerase I transcription factor xUBF contains 5 tandemly repeated HMG homology boxes.";

"The RNA polymerase I transcription factor xUBF contains 5 tandemly nucleic Acids Res. 19:231-2335(1991).

"I-FUNCTION: UBF RECOGNIZES THE RIBOSOMAL RNA GENE PROMOTOR AND ACTIVATES TRANSCRIPTION WEDIATED BY RNA POLYMERASE I THROUGH.

COOPERATIVE INTERACTIONS WITH THE SPECIES-SPECIFIC FACTOR SLI.

IT BINDS SPECIFICALLY TO THE UPSTREAM CONTROL ELEMENT.

SUBUNIT: XUBF CONSISTS OF 2 POLYPEPTIDES OF 82 AND 85 KDA, ENCODED BY THE SAME OR CLOSELY RELATED GENES.

SUBCELLULAR LOCATION: NUCLEAR.

SUBCELLULAR LOCATION: NUCLEAR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PIR; S15667; S15667.
